WHY HOME ASSISTANT · PRE-INSTALLED · ON YOUR HOME NETWORK

Your reef, and every smart thing in your home, in one app.

CONTROL FREAK

Reef Control Pro comes with Home Assistant already installed and the Control Freak integration already connected. You get everything people love about it, without the setup. Just plug it in.

One app. No more app juggling.

How many apps do you open today? Home Assistant puts your tank and the rest of your smart home in one place, so you have one app to check and one to control.

Your brands finally work together

Home Assistant works with over 1,000 brands through 1,500+ integrations. Lights, plugs, thermostats, locks, speakers and cameras you already own can finally talk to each other.

Works when the internet doesn't

It runs on the controller on your home network, not in someone else's cloud, so it answers right away and keeps working when the internet doesn't. Your data stays home.

Ask, don't open

Ask Alexa what the status is, tell Google to adjust the temperature, or use Siri through HomeKit, and get automated voice alerts when something is out of balance.

Peace of mind, all over the house

Anything your tank knows can set off something else: lights, speakers, thermostats and alerts on every phone. A few ideas are below.

Nobody can switch it off

Your setup lives in your home, not on a company's server. Home Assistant is open source, and run by a non-profit that can't be sold. Control Freak adds no subscription.

IDEAS YOU CAN BUILD IN HOME ASSISTANT · EXAMPLES WITH YOUR OWN DEVICES

IDEA · EXAMPLE

Water under the stand

Hallway lights flash and every speaker says where.

IDEA · EXAMPLE

Feeding time

A button by the tank starts Feed mode; pumps pause, then resume.

IDEA · EXAMPLE

Reef sunset

As the reef lights ramp down, the living-room lamps dim with them.

Home Assistant figures: home-assistant.io, October 2026. Home Assistant is a trademark of the Open Home Foundation. Your lights, speakers and thermostat aren't in the box.
