CONTROL FREAK

CONCEPT PHOTO

01
8 Smart Outlets
Control by your voice, a tap, or an automation.

02
Smart Flow Control
Automatically pauses during feeding time and maintenance, then resumes on its own.

03
In Perfect Balance
Automatic dosing and pH control keep your tank at optimal levels continuously.

04
Auto Water Leveling
Holds water height steady and alerts you via push, Alexa, or Google Home when the reservoir is low.

05
Heater Fail-Safe
Pumps stay on while the heater automatically stands down above 82°F.

06
Automate Your Tank & Life
Pre-configured Home Assistant hub built in—unifying your reef and your entire smart home in one app.

REEF CONTROL PRO · BROUGHT TO YOU BY CONTROL FREAK

CONCEPT · DEMO UI · DARK MODE

CONCEPT PHOTO

In Perfect Balance

Automatic dosing and pH control work together to keep your tank's environment at its optimal levels continuously. Instead of sudden swings, this constant feedback loop and real-time micro-adjustments provide a much healthier, stress-free environment for your coral and fish to live in.

CONCEPT · DEMO UI · LIGHT MODE

PROACTIVE RESERVOIR MONITORING · FOLDABLE DEVICE MOCK

Auto Water Leveling That Talks to You

CONTROL FREAK

Our control system continuously monitors the height of the water and ensures that it stays at an optimal height automatically. When the top-off reservoir finally gets low, we notify you immediately via phone push notifications—or out loud by voice through Alexa or Google Home—so you know exactly when to add water.

Folded → unfolded
Right where you left off

Water Level Optimal
Height held steady, automatically.

Voice Alerts Armed
Push, Alexa, and Google Home when the reservoir is low.

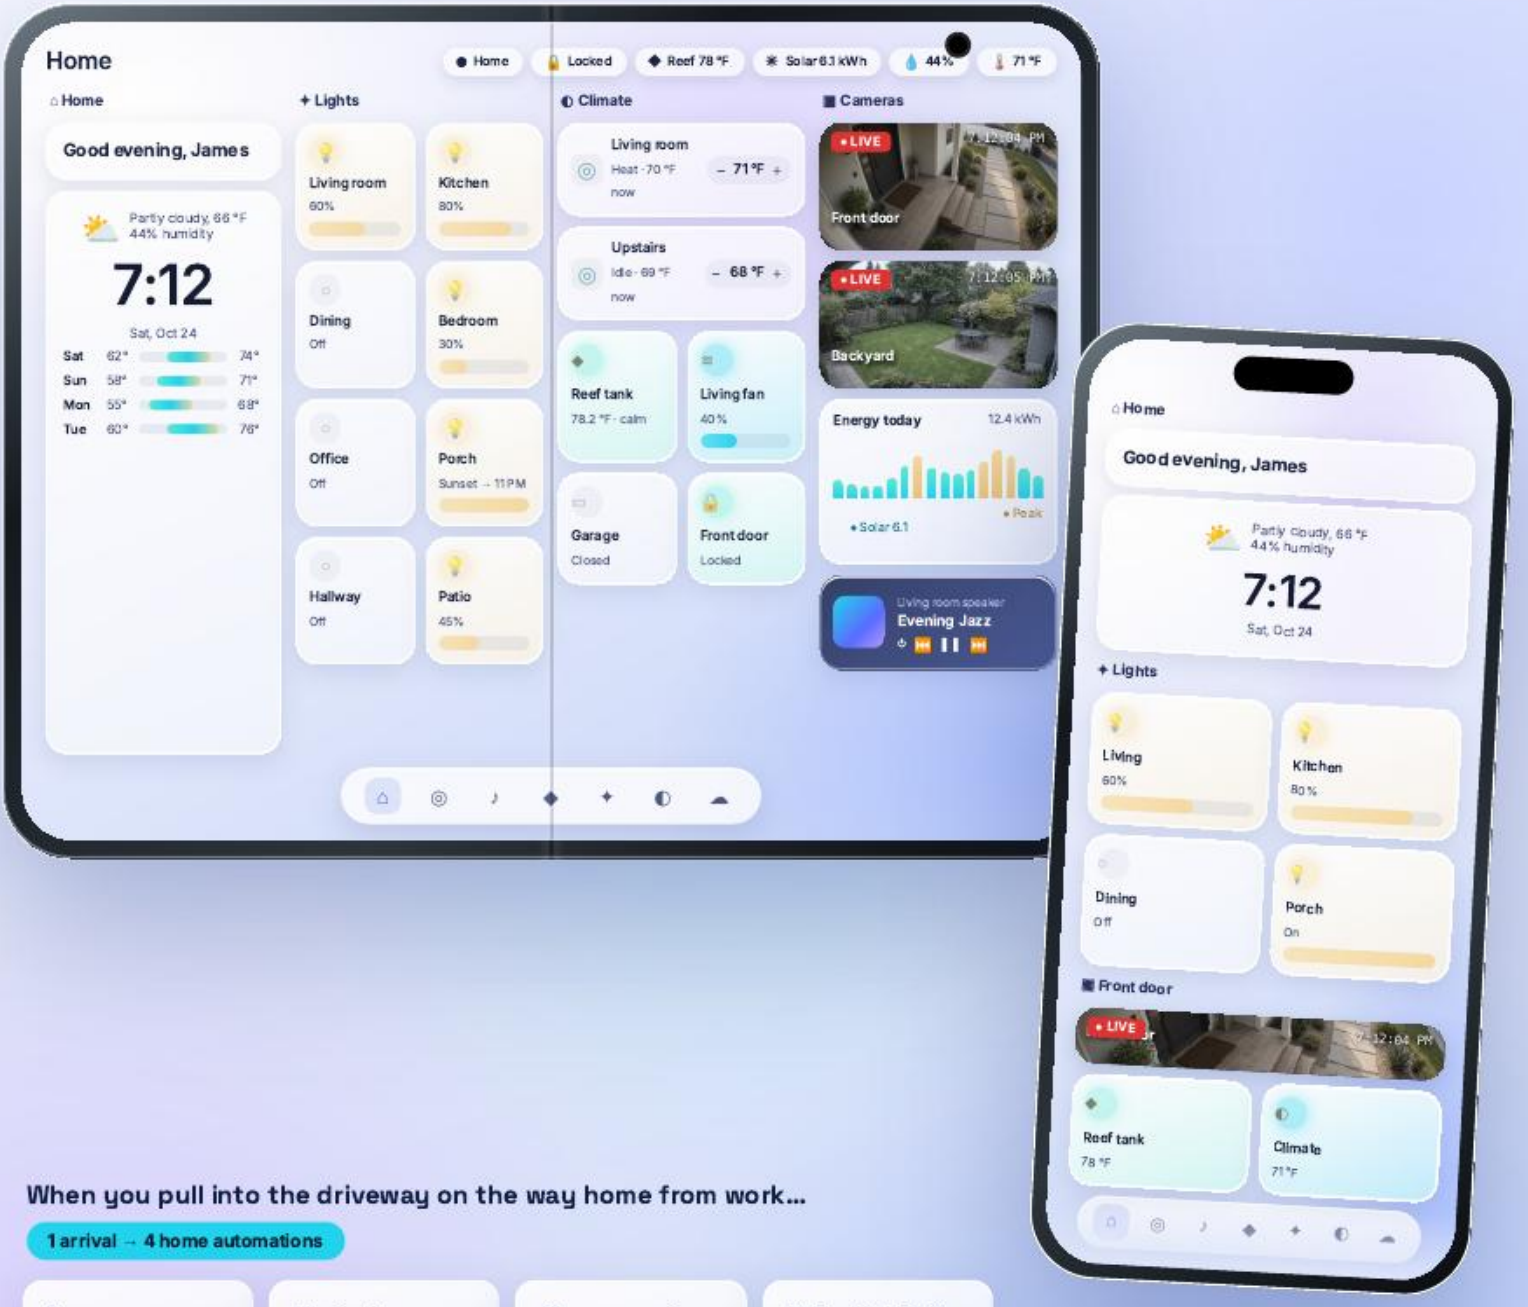

8 Smart Outlets Active
Every switch, every watt, in a single glance.

PRE-CONFIGURED HOME ASSISTANT HUB BUILT IN

Automate more than just your tank. Automate the rest of your life.

CONTROL FREAK

Control Freak eliminates app fatigue by bringing all of your smart and internet-connected devices into a single, unified platform—complete observability, one-app control, and cross-brand automation.

When you pull into the driveway on the way home from work...

1 arrival → 4 home automations

Garage opens
Phone plus car Bluetooth sense you're home—the door rises as you arrive.

Heated bathroom floor on
Warm underfoot by the time you're upstairs.

Shower water warming
Hot water is ready when you step in—no waiting at the tap.

Entry lights if dark
Porch and hall come on only when it's already evening.

WHY HOME ASSISTANT · PRE-INSTALLED · ON YOUR HOME NETWORK

Your reef, and every smart thing in your home, in one app.

CONTROL FREAK

Reef Control Pro comes with Home Assistant already installed and the Control Freak integration already connected. You get everything people love about it, without the setup. Just plug it in.

One app. No more app juggling.

How many apps do you open today? Home Assistant puts your tank and the rest of your smart home in one place, so you have one app to check and one to control.

Your brands finally work together

Home Assistant works with over 1,000 brands through 1,500+ integrations. Lights, plugs, thermostats, locks, speakers and cameras you already own can finally talk to each other.

Works when the internet doesn't

It runs on the controller on your home network, never cloud Home Assistant, so it answers right away and keeps working when the internet is down. Your data stays home.

Ask, don't open

Ask Alexa what the status is, tell Google to adjust the temperature, or use Siri through HomeKit, and get automated voice alerts when something is out of balance.

Peace of mind, all over the house

Anything your tank knows can set off something else: lights, speakers, thermostats and alerts on every phone. A few ideas are below.

Nobody can switch it off

Your setup lives in your home, not on a company's server. Home Assistant is open source, and run by a non-profit that can't be sold. Control Freak adds no subscription.

IDEAS YOU CAN BUILD IN HOME ASSISTANT · EXAMPLES WITH YOUR OWN DEVICES

IDEA · EXAMPLE

Water under the stand

Hallway lights flash and every speaker says where.

IDEA · EXAMPLE

Feeding time

A button by the tank starts Feed mode; pumps pause, then resume.

IDEA · EXAMPLE

Reef sunset

As the reef lights ramp down, the living-room lamps dim with them.

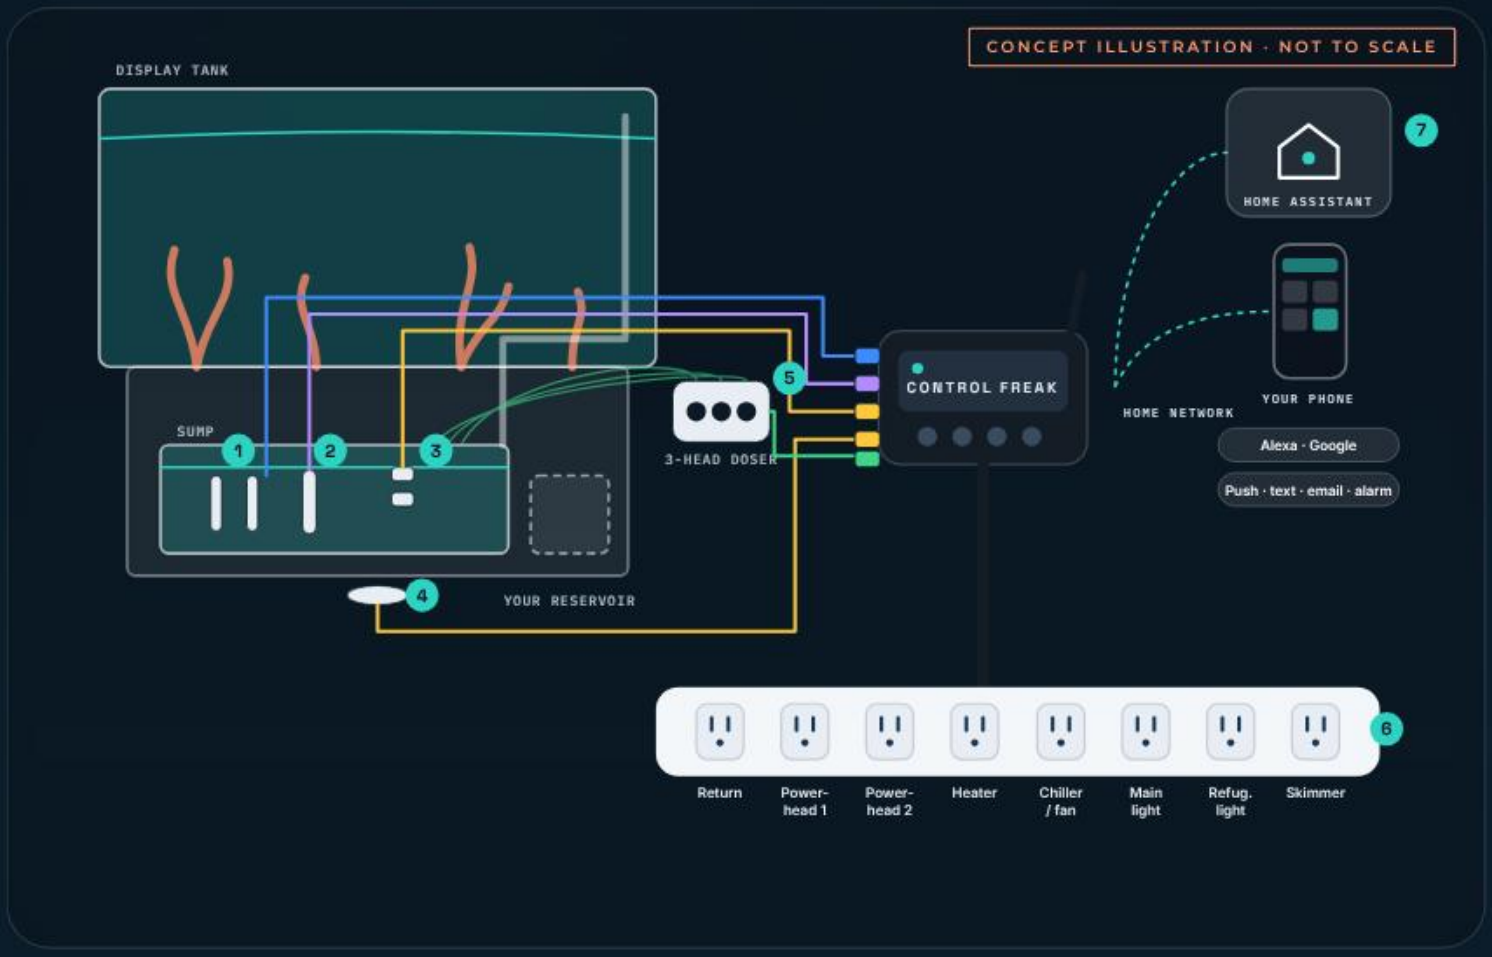

Home Assistant figures: home-assistant.io, October 2026. Home Assistant is a trademark of the Open Home Foundation. Your lights, speakers and thermostat aren't in the box.

HOW IT ALL CONNECTS · THE WHOLE TANK ON ONE CONTROLLER

One controller under the stand.

The probes, top-off, leak sensor and doser plug into the controller; the pumps, heater and lights plug into the Power Hub. Keyed, colour-coded plugs only fit their own port — scan the QR code and you're set up.

CONTROL FREAK

1. **Temperature probes**
   Two in the kit, room for more. The heater stands down above your limit.
2. **pH probe**
   pH right on the home screen, with trends.
3. **Top-off sensors and pump**
   Tops up evaporation with an overfill lockout. Just add a reservoir.
4. **Leak sensor**
   Water on the floor under the stand is caught early.
5. **3-head doser**
   Ca, Alk and Mg in small, steady doses.
6. **Power Hub**
   8 smart outlets. Return and powerheads stay on if the controller loses power.
7. **Home Assistant, pre-installed**
   One app for the reef and the home. Voice through Alexa and Google; alerts when you're away.

8 SMART OUTLETS IN ONE POWER HUB

3 DOSING HEADS: CA · ALK · MG

THE DEMO, SCENE BY SCENE

Ready for the moments that matter.

CONTROL FREAK

SCENE 1 · FEED

Feed mode

One tap quiets the return and powerheads.

Feed · resuming in 9:42

Flow comes back on its own. Nothing forgotten.

SCENE 2 · LEAK

▲ Water on the floor

Water under the stand? Top-off locks out instantly.

Alerts reach you — including when you're away (cloud with Tailscale).

SCENE 3 · POWER LOSS

Controller offline

• Return · • Powerheads — still on

○ Heater — off, on its own thermostat

The heater stands down before the water gets too warm.

SCENE 4 · INTERNET DOWN

Still running

The brains live under the stand, not in the cloud. Ethernet, Wi-Fi, or its own network as backup.

SCENE 5 · DOSING

Ca Scheduled | Alk Scheduled | Mg Scheduled

pH 8.14

Ca, Alk, and Mg on schedule — pH right on the home screen.

SCENE 6 · VOICE

"Alexa, how's the reef?"

Alexa, Siri, or Google via Home Assistant bridges. HA stays on your home network.

ONE APP

How many apps do you open to run your home? Reef Control Pro ships with Home Assistant and the Control Freak integration already set up, so your tank and the rest of your smart home meet in one place. Connect the devices you already own. Simplify to a single app. Alexa, Siri, and Google Home use Home Assistant's normal bridges. Get alerts, including when you're away (cloud with Tailscale). Home Assistant stays on your home network — never cloud Home Assistant.

WHY IT'S DIFFERENT

Steady, even offline. The controller under the stand runs the tank. If the Wi-Fi drops, your pumps and heater don't miss a beat.

Top-off and leak alarm, included. Evaporation replaced, overfill locked out, water on the floor caught early. Just add a reservoir.

One app for the reef and the home. Home Assistant and the Control Freak integration, ready out of the box.

IN THE PRO KIT

- Controller with Home Assistant + Control Freak integration
- Power Hub — 8 switched outlets
- 2 temperature probes
- Auto top-off pump + level sensors
- Leak alarm sensor
- 3-head doser (Ca · Alk · Mg)
- pH probe
