Put the *Control Freak* on it.

Terrarium Control Pro
CONCEPT MARK

Sit back and enjoy your enclosures — the system keeps the heat, light and mist on schedule. Heat, light and misting for up to three enclosures. From one controller. No subscription.

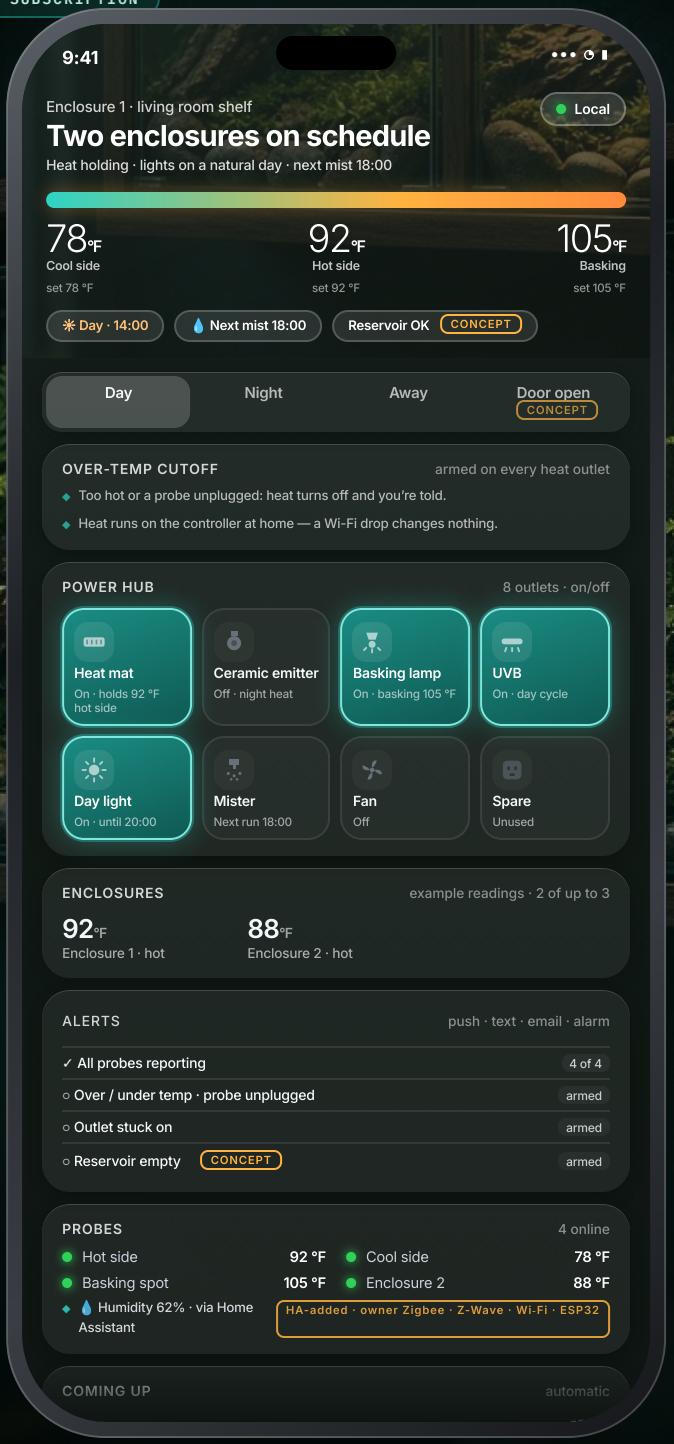
VOICE & TAP · AWAY ALERTS · NO SUBSCRIPTION

CONCEPT PHOTO

01 One kit for 2–3 enclosures
8 switched outlets and 4 temperature probes, with a thermostat on any outlet — not one thermostat per enclosure.

02 Heat control stays home
The controller runs heat locally, so a Wi-Fi drop or a server outage changes nothing.

03 Over-temp cutoff + probe check
If a probe reads too hot, or is unplugged, its heat outlet turns off and you're told.



04 Home Assistant, full control
Pre-installed with the Control Freak integration. Setpoints and outlets work from your dashboards.

05 Day/night + seasonal ramps
Lights and temperatures follow a natural day, with editable profiles to start from.

06 Misting on schedule
Timed misting from a switched outlet. Reservoir float and door pause are Concept.

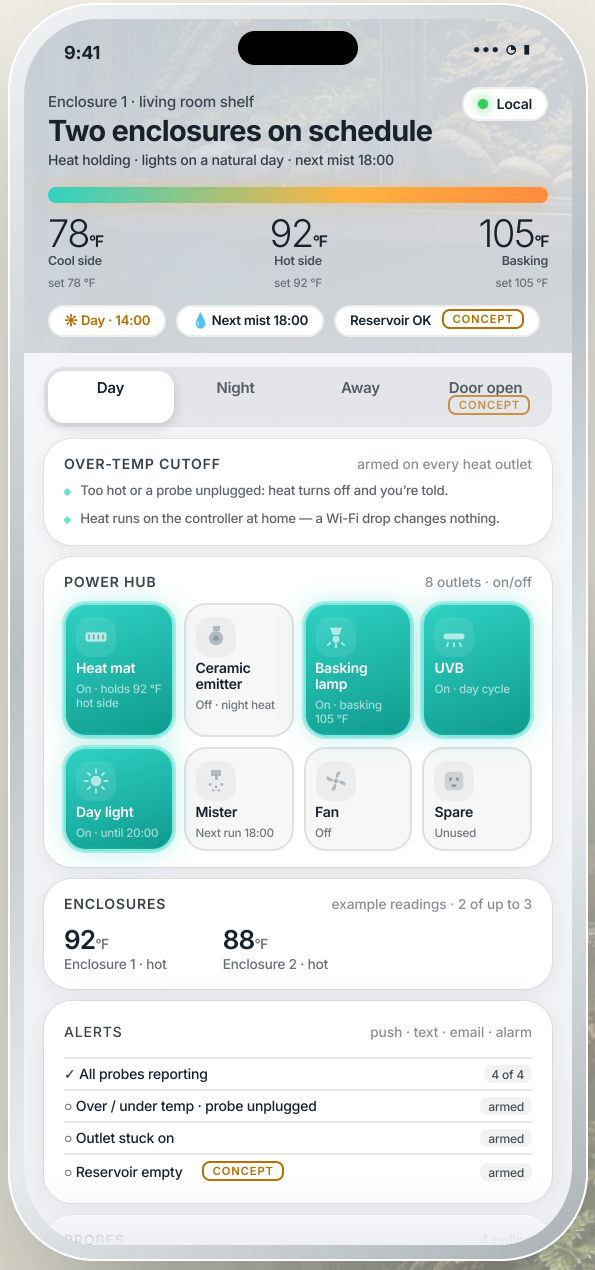
TERRARIUM CONTROL PRO · BROUGHT TO YOU BY CONTROL FREAK

CONCEPT · DEMO UI · EXAMPLE READINGS

SAME APP · LIGHT MODE

Calm, in *daylight.*

Glance at the shelf over coffee: cool side, hot side and basking spot against their setpoints, what the lights are doing, when the next mist runs — and every outlet on the Power Hub, on or off.

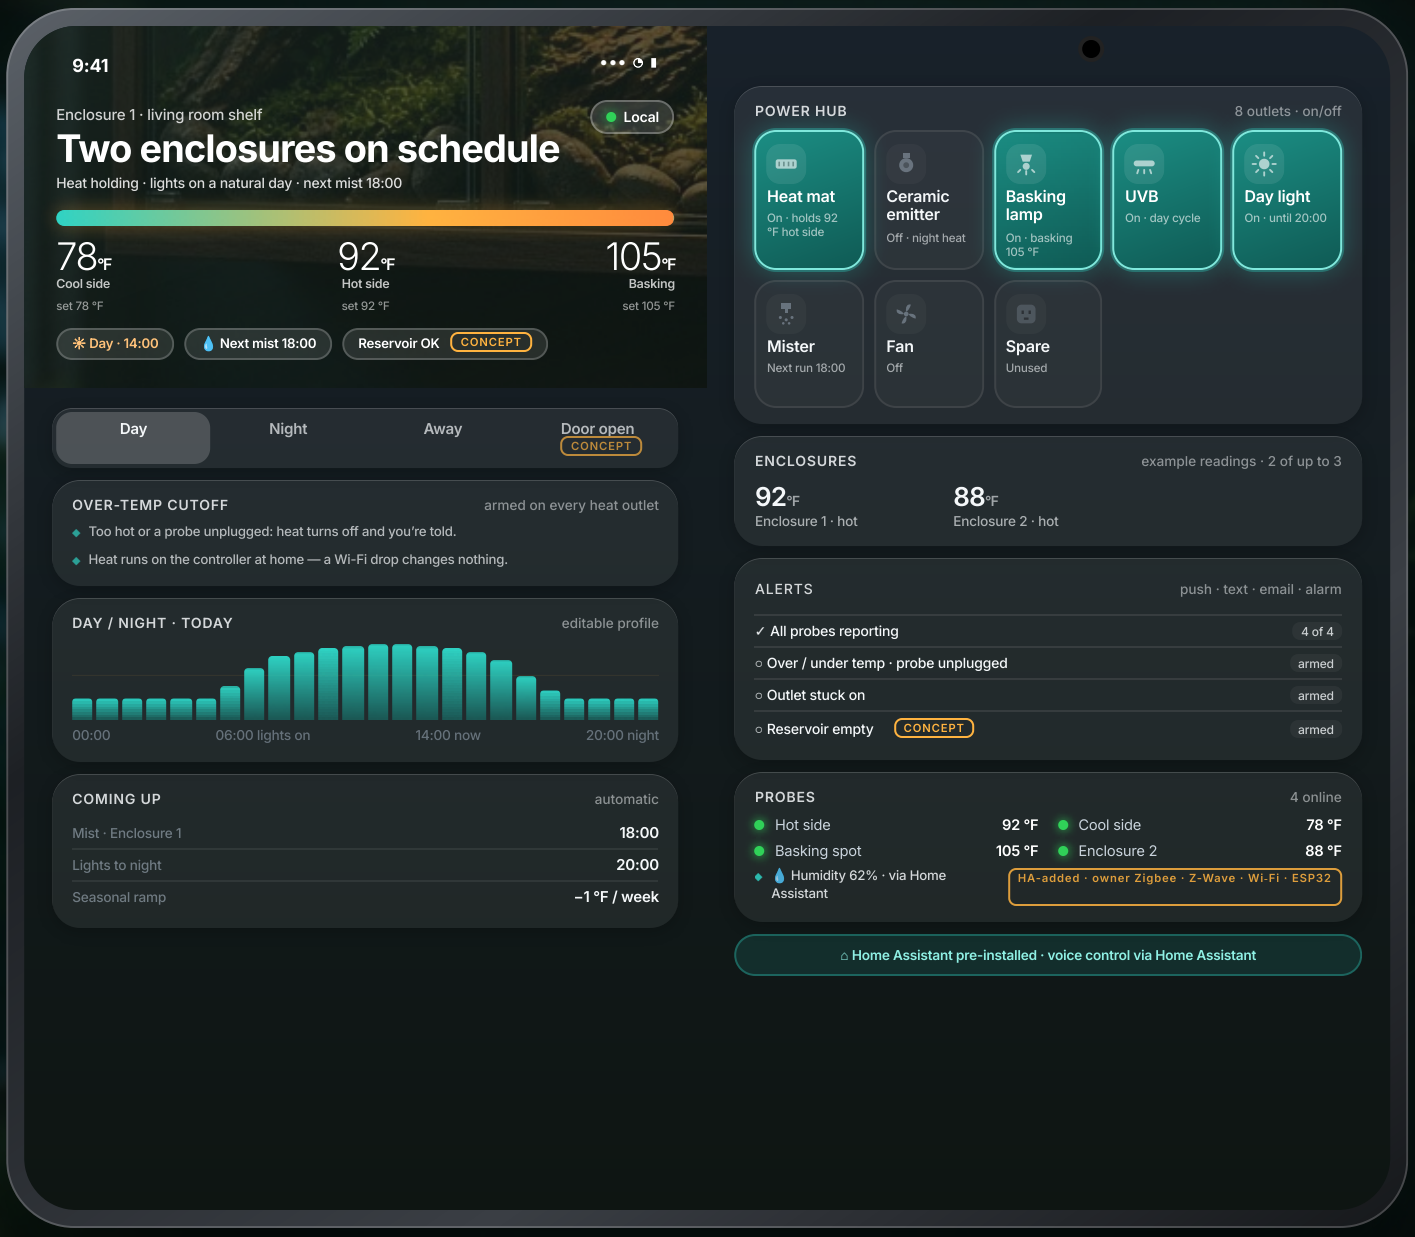


CONCEPT · FOLDABLE DEVICE MOCK · DEMO

The whole shelf, unfolded.

The heat gradient and today's day/night curve on one side. All eight outlets, the probes and alerts on the other. Tap a setpoint, switch to night or try an alert in the site demo.

Terrarium Control Pro
CONCEPT MARK



Aqua means on
Lit tiles for outlets that are on; muted for off. Every outlet is on/off.

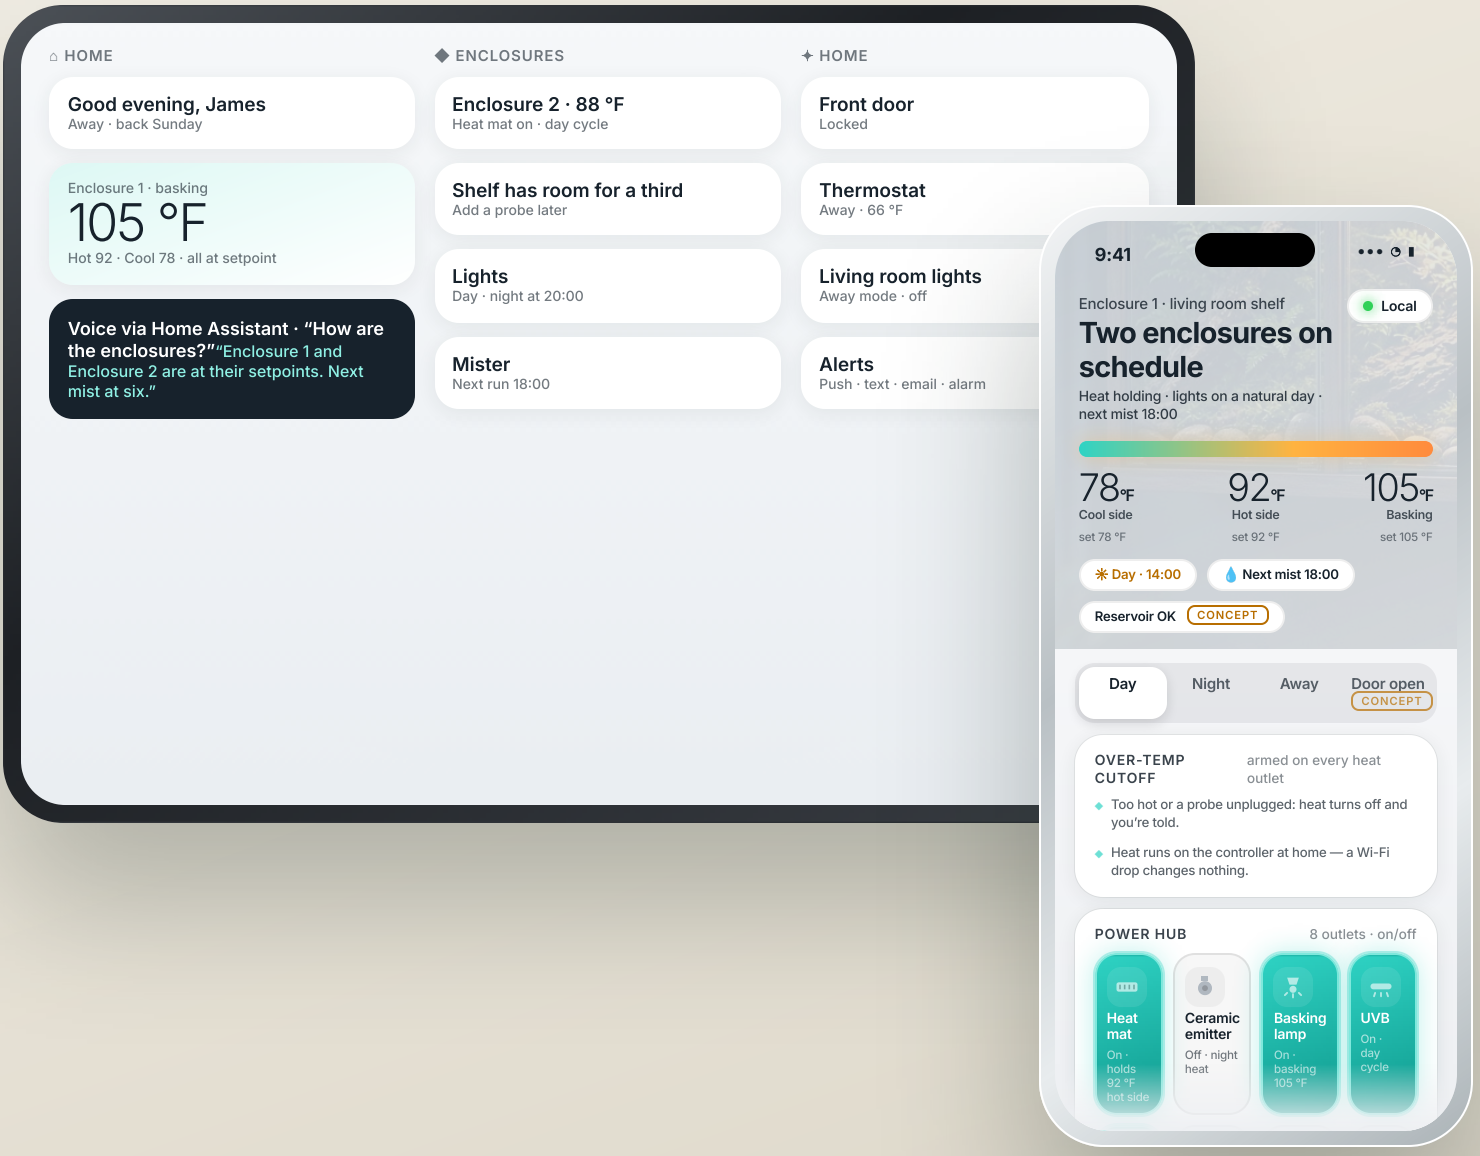
Warm means daytime
Basking-light amber marks the day cycle — coral only for a warning.

Runs at home
Heat keeps being controlled when Wi-Fi or a cloud app hiccups.

HOME ASSISTANT PRE-INSTALLED · ON YOUR HOME NETWORK

How many apps do you open to run your home?

Terrarium Control Pro ships with Home Assistant and the Control Freak integration already set up, so your enclosures and the rest of your smart home meet in one place. Connect the devices you already own and simplify to a single app. Use the voice assistant you already have, via Home Assistant, to check status or adjust a setpoint. Home Assistant stays on your home network — never cloud Home Assistant.



A weekend away from the shelf...

2 enclosures → kept on schedule

Heat holds

Each heat outlet keeps its own setpoint on the controller — even if the home Wi-Fi drops.

A natural day

Lights come on, go to night values and come back, following your profile.

Mist on time

The mister outlet runs on its schedule, enclosure by enclosure.

You're told

Too hot or a probe unplugged: heat turns off and an alert reaches you by push, text or email.

WHY HOME ASSISTANT · PRE-INSTALLED · ON YOUR HOME NETWORK

Your enclosures, and every smart thing in your home, in one app.

Terrarium Control Pro
CONCEPT MARK

Terrarium Control Pro comes with Home Assistant already installed and the Control Freak integration already connected. You get everything people love about it, without the setup. Just plug it in.

One app. No more app juggling.

How many apps do you open today? Home Assistant puts your shelf and the rest of your smart home in one place, so you have one app to check and one to control.

Your brands finally work together

Home Assistant works with over 1,000 brands through 1,500+ integrations. Lights, plugs, thermostats, locks, speakers and cameras you already own can finally talk to each other.

Works when the internet doesn't

It runs on the controller on your home network, never cloud Home Assistant, so it answers right away and keeps working when the internet is down. Your data stays home.

Ask, don't open

Ask Alexa what the status is, tell Google to adjust the temperature, or use Siri through HomeKit, and get automated voice alerts when something is out of balance.

Peace of mind, all over the house

Anything your shelf knows can set off something else: lights, speakers, thermostats and alerts on every phone. A few ideas are below.

Nobody can switch it off

Your setup lives in your home, not on a company's server. Home Assistant is open source, and run by a non-profit that can't be sold. Control Freak adds no subscription.

IDEAS YOU CAN BUILD IN HOME ASSISTANT · EXAMPLES WITH YOUR OWN DEVICES

IDEA · EXAMPLE

Lights to night

When the enclosures switch to night, the room lamp dims too.

IDEA · EXAMPLE

Humidity, your way

Add your own wireless humidity sensor; it shows beside the temperatures.

IDEA · EXAMPLE

Over-temperature cutoff

Speakers announce which enclosure, and your phone gets a push.

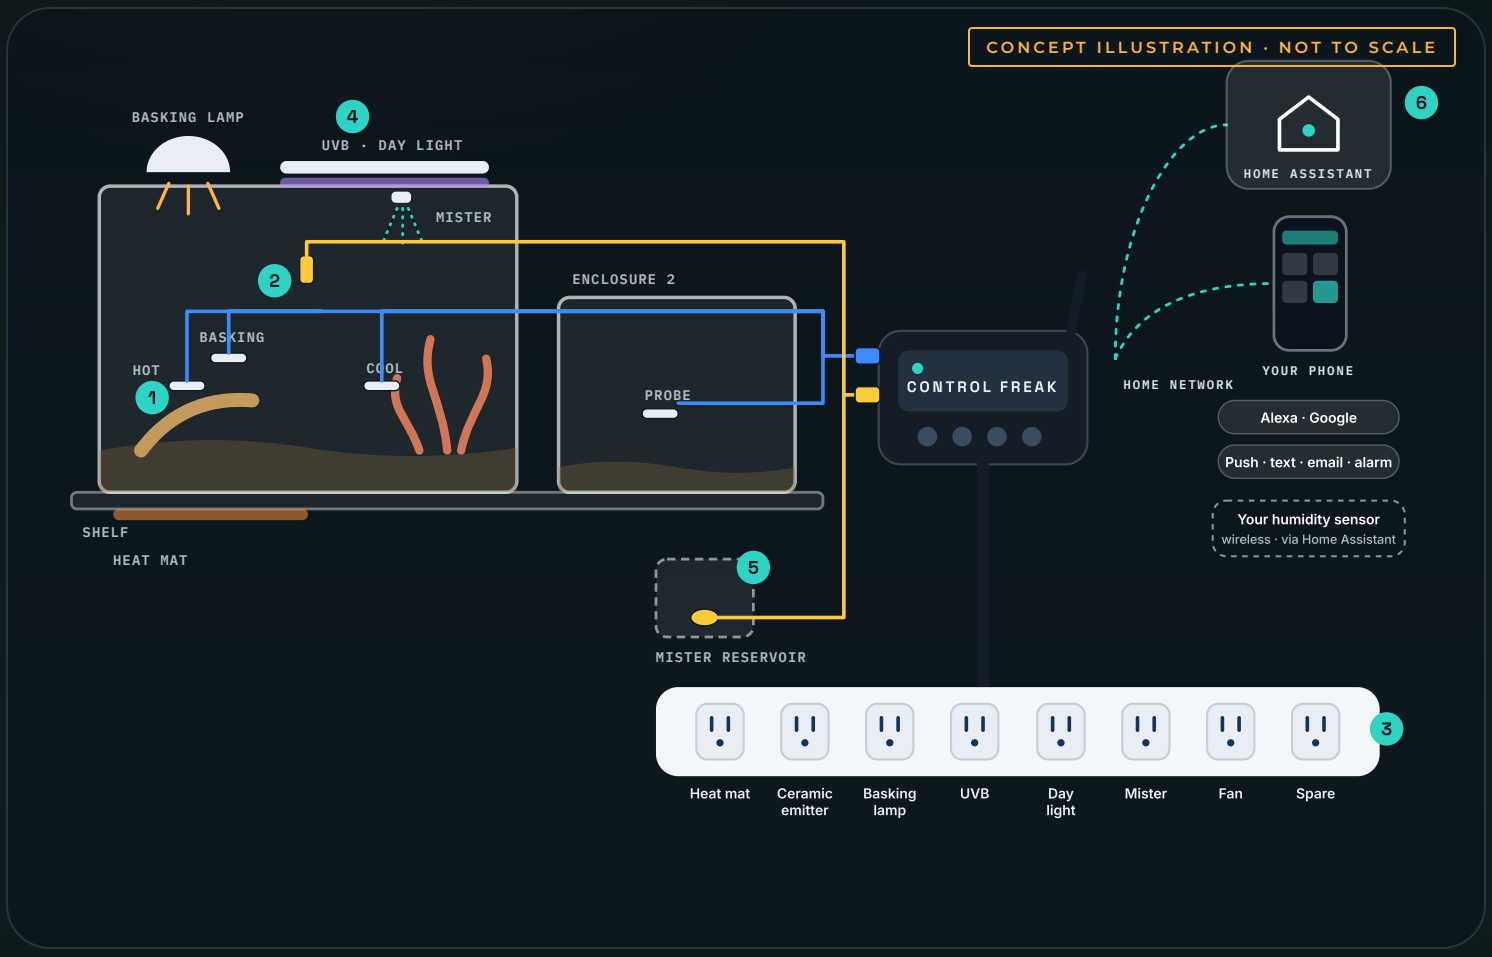
Home Assistant figures: home-assistant.io, October 2026. Home Assistant is a trademark of the Open Home Foundation. Your lights, speakers and thermostat aren't in the box.

HOW IT ALL CONNECTS · UP TO THREE ENCLOSURES

One controller for the whole shelf.

Terrarium Control Pro
CONCEPT MARK

Heat, light and misting for up to three enclosures. From one controller. No subscription.



1 — 4 temperature probes
Hot side, cool side, basking spot and a second enclosure — a thermostat on any outlet. Too hot or a probe unplugged: heat turns off and you're told.

2 — Door switch
Pauses misting and fans while you're feeding. Concept.

3 — Power Hub
8 on/off outlets: heat mat, ceramic emitter, basking lamp, UVB, day light, mister, fan and a spare.

4 — Day/night cycles
Lights and temperatures follow a natural day, with seasonal ramps.

5 — Mister reservoir float
Stops misting before the reservoir runs dry. Concept.

6 — Home Assistant, full control
Setpoints and outlets from your dashboards. Add humidity with your own wireless sensor.

8	SWITCHED OUTLETS
4	TEMPERATURE PROBES
2–3	ENCLOSURES FROM ONE KIT

TERRARIUM CONTROL PRO · WHAT IT DOES

One controller for the whole shelf.

Each heat source holding its own setpoint, lights on a natural day, and misting on time — for 1–3 enclosures, without stacking a separate thermostat per enclosure or juggling vendor apps.

Set up in minutes: scan the QR code; keyed, colour-coded plugs only fit their port. Built on a controller we already ship — the same controller as Control Freak's live pool product, not a one-off board. Profiles are editable starting points. Price to be announced.

IN THE PRO KIT

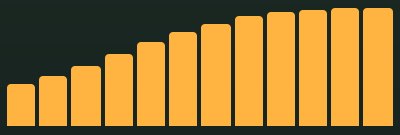
- Controller with Home Assistant pre-installed + Control Freak integration
- Power Hub — 8 switched outlets, on/off (heat mats, ceramic emitters, UVB, day lights, fans, mister)
- 4 temperature probes — hot side, cool side, basking spot, second enclosure
- Door switch + mister reservoir float CONCEPT

Concept accessory: a separate dimming module for heat bulbs — the Power Hub and controller don't dim. Later: temperature & humidity sensor (with Modbus support), extra probes, a second Power Hub.

TRY IT IN THE SITE DEMO

DRAG A SETPOINT

Hot side 88 → 92 °F

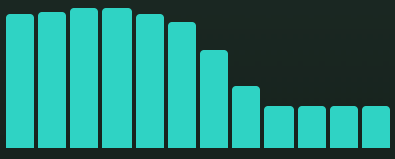


Heat mat on · easing to 92 °F

Set a new target on the gradient strip and the reading eases toward it.

DAY → NIGHT

Lights off · night values

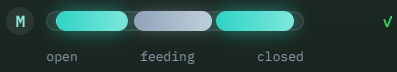


Day light + UVB off · ceramic emitter on

Tap the day/night chip: lights and setpoints switch to the night profile.

DOOR OPEN · CONCEPT

Mist + fan paused



Concept: door switch pending confirmation

Open the door to feed and misting and the fan pause; close it and they resume.

Heat stays local
A Wi-Fi drop or server outage changes nothing.

Alerts that reach you
Over/under temp, probe unplugged, outlet stuck on — by push, text, email or alarm, including when you're away.

No subscription
Home Assistant on your home network. Voice assistants via Home Assistant.

DEMO · TAP "ALERT EXAMPLE"

EXAMPLE ALERT

Enclosure 1 hot side over temperature · heat mat switched off · push and text sent

Coral appears only for a warning. Everyday state is calm aqua and warm daylight.
