WHY HOME ASSISTANT · PRE-INSTALLED · ON YOUR HOME NETWORK

Your reef, and every smart thing in your home, in one app.

CONTROL FREAK

Reef Control Pro ships with Home Assistant and the Control Freak integration already set up. Here's what that gives you, from every angle.

One app for the reef and the home

How many apps do you open today? Home Assistant puts your tank and the rest of your smart home on one screen — set up and ready, not a weekend project.

Works with what you already own

Home Assistant works with over 1,000 brands through 1,500+ integrations: lights, plugs, thermostats, locks, speakers and cameras you already have.

Your home, your data

Home Assistant puts local control and privacy first. It runs on the controller on your home network — never cloud Home Assistant — and keeps working when the internet doesn't.

Ask, don't open

Ask Alexa what the status is, tell Google to adjust the temperature, or use Siri through HomeKit — and get automated voice alerts when something is out of balance.

Automate the whole house

Anything your tank knows can start something else in your home: lights, speakers, thermostats, notifications. A few ideas are below.

Built to last

Home Assistant is open source and run by a non-profit that can't be sold or acquired. Over 2.7 million households use it, and Control Freak adds no subscription.

IDEAS YOU CAN BUILD IN HOME ASSISTANT · EXAMPLES WITH YOUR OWN DEVICES

IDEA · EXAMPLE

Water under the stand

Hallway lights flash and every speaker says where.

IDEA · EXAMPLE

Feeding time

A button by the tank starts Feed mode; pumps pause, then resume.

IDEA · EXAMPLE

Reef sunset

As the reef lights ramp down, the living-room lamps dim with them.

Home Assistant figures: home-assistant.io, October 2026. Home Assistant is a trademark of the Open Home Foundation. Your lights, speakers and thermostat aren't in the box.
