Your plunge, *ready* when you are.

Set “ready by 6:30.” Cold Plunge Control Pro works back from the water temperature, starts your chiller early, and keeps the water clean and flowing — so you just step in.

Cold Plunge Control Pro
WORKING NAME · CONCEPT

01
Ready when you are
Set “ready by 6:30”; the controller starts cooling early so the water is at your target when you step in.

02
Holds your temperature
A water probe keeps the plunge at the target you set, all day.

03
Works with the chiller you have
Runs a 120 V plug-in chiller from the Power Hub; keep your chiller, and swap in a new one later without changing the rest.

04
Chiller only runs with water flowing
A flow switch on the pipe stops the chiller running dry.

05
Clean water on a schedule
Ozone and UV run only while the pump moves water; filtration cycles keep it clear without the pump running all day.

06
Alerts that reach you
No flow, water too warm, filter, cold night; push, text, email and alarm, including away from home.

Cold Plunge Control Pro
WORKING NAME · CONCEPT

Chiller only runs with water flowing

A flow switch on the pipe stops the chiller running dry.

Filter reminder (Pro)

Tells you to clean the filter before flow drops.

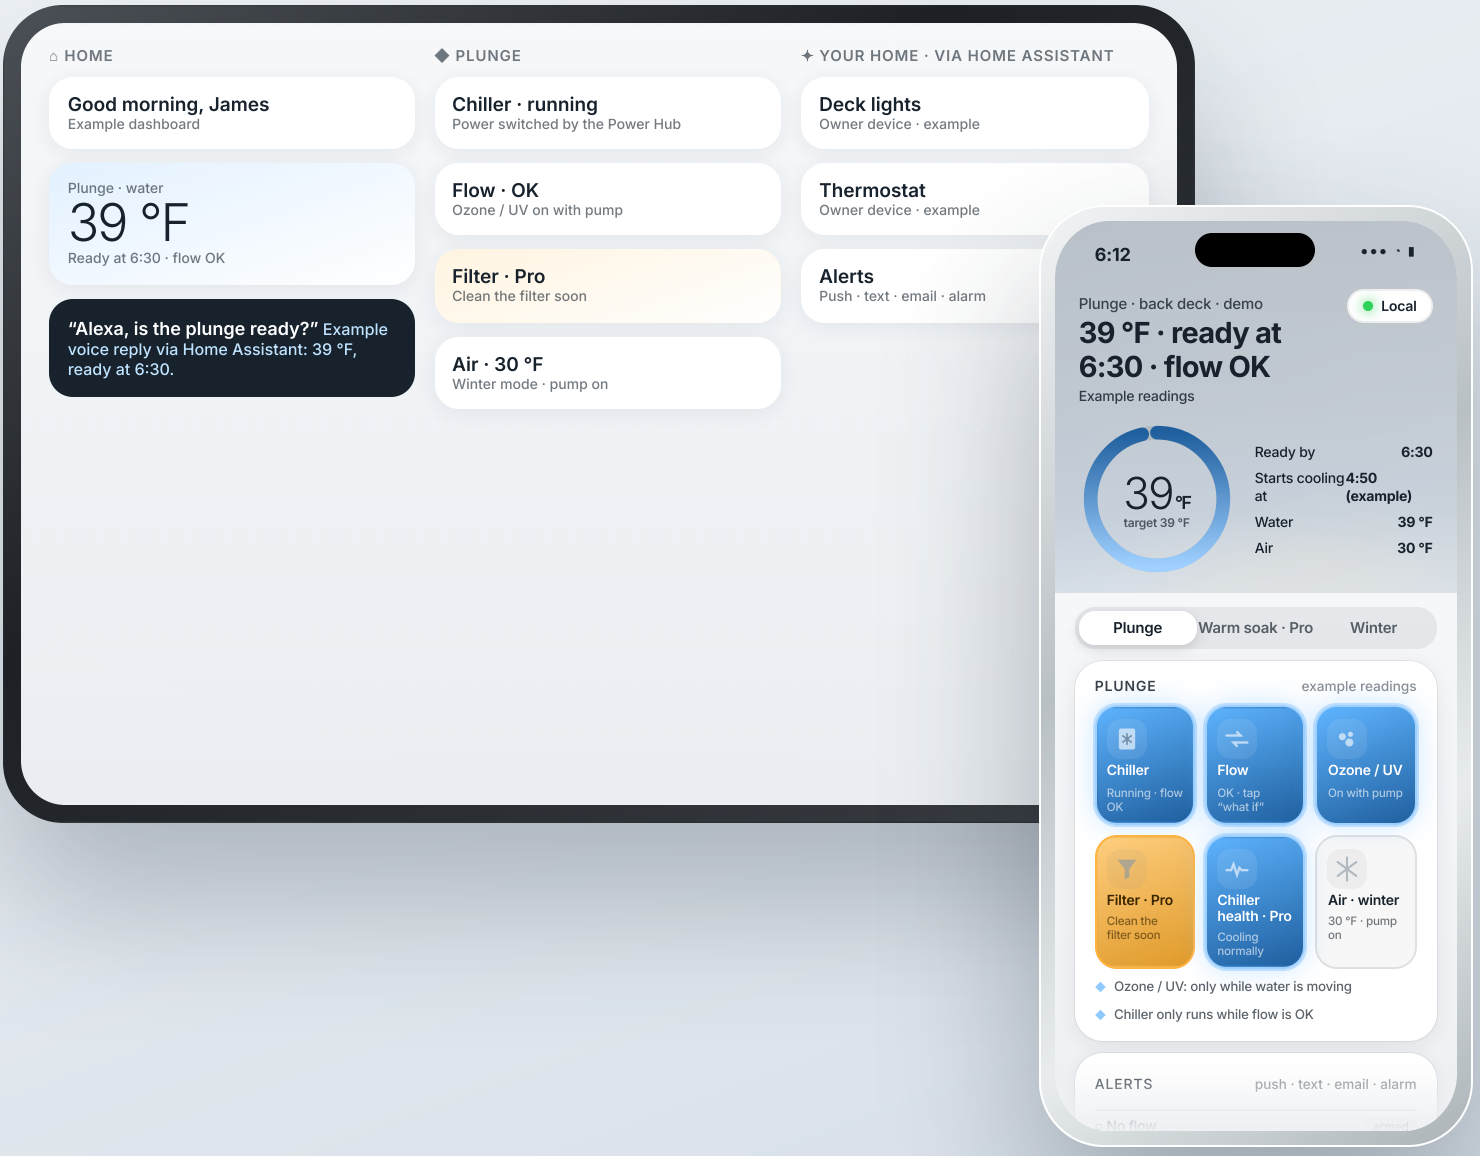
Keeps working when the internet doesn’t

Schedules run on the controller. Ethernet, Wi-Fi, and its own Wi-Fi network.

HOME ASSISTANT PRE-INSTALLED · ON YOUR HOME NETWORK

How many apps do you have to open to control your smart products?

Cold Plunge Control Pro ships with Home Assistant and the Control Freak integration already set up, so your plunge and the rest of your smart home meet in one place. Connect the apps and devices you already own and simplify to a single app. Multi-platform integration built in: ask Alexa what the status is, tell Google to adjust the temperature, and receive automated voice alerts to let you know when something is out of balance.



A cold night, handled.

Example · winter mode

Winter mode
The pump runs when the air nears freezing, protecting outdoor tubs and pipes.

Keeps working
Schedules run on the controller.

Alerts that reach you
Push, text, email and alarm, including away from home.

Local
Home Assistant stays on your home network — never cloud Home Assistant.

WHY HOME ASSISTANT · PRE-INSTALLED · ON YOUR HOME NETWORK

Your plunge, and every smart thing in your home, in one app.

Cold Plunge Control Pro
WORKING NAME · CONCEPT

Cold Plunge Control Pro comes with Home Assistant already installed and the Control Freak integration already connected. You get everything people love about it, without the setup. Just plug it in.

One app. No more app juggling.

How many apps do you open today? Home Assistant puts your plunge and the rest of your smart home in one place, so you have one app to check and one to control.

Your brands finally work together

Home Assistant works with over 1,000 brands through 1,500+ integrations. Lights, plugs, thermostats, locks, speakers and cameras you already own can finally talk to each other.

Works when the internet doesn't

It runs on the controller on your home network, not in someone else's cloud, so it answers right away and keeps working when the internet doesn't. Your data stays home.

Ask, don't open

Ask Alexa what the status is, tell Google to adjust the temperature, or use Siri through HomeKit, and get automated voice alerts when something is out of balance.

Peace of mind, all over the house

Anything your plunge knows can set off something else: lights, speakers, thermostats and alerts on every phone. A few ideas are below.

Nobody can switch it off

Your setup lives in your home, not on a company's server. Home Assistant is open source, and run by a non-profit that can't be sold. Control Freak adds no subscription.

IDEAS YOU CAN BUILD IN HOME ASSISTANT · EXAMPLES WITH YOUR OWN DEVICES

IDEA · EXAMPLE

Alarm set for 6:00

Ready-by follows your morning: the water is at target by 6:30.

IDEA · EXAMPLE

"Alexa, is the plunge ready?"

Hear the water temperature before you head outside.

IDEA · EXAMPLE

Out of the plunge

The bathroom floor heat comes on, so you warm up after.

Home Assistant figures: home-assistant.io, October 2026. Home Assistant is a trademark of the Open Home Foundation. Your lights, speakers and thermostat aren't in the box.

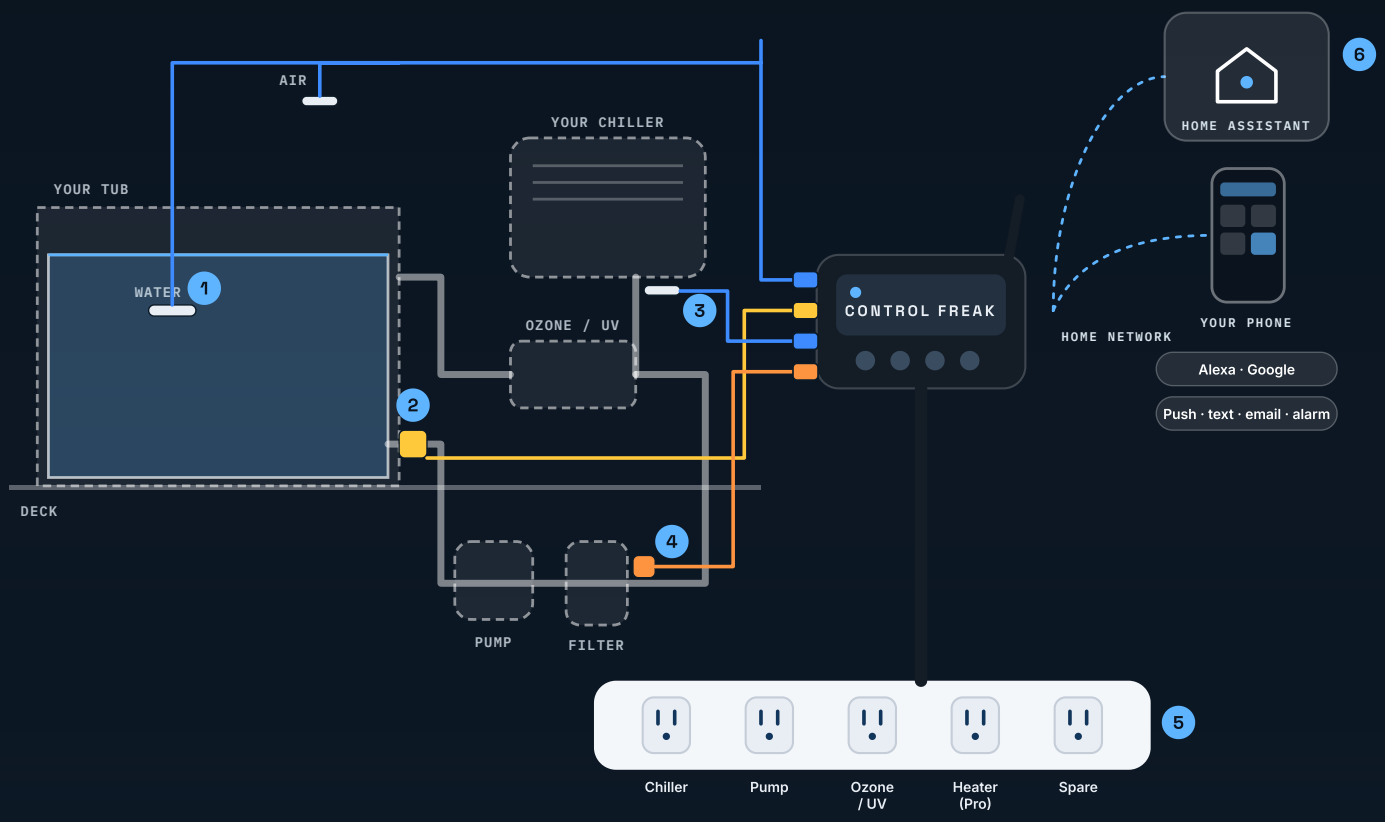
HOW IT ALL CONNECTS · TUB, CHILLER AND PUMP

Ready when you are, from one controller.

Cold Plunge Control Pro
WORKING NAME · CONCEPT

Keep your tub, chiller, pump, ozone and UV. The Power Hub switches their power, and the probes and flow switch watch the water — so you just step in.

CONCEPT ILLUSTRATION · NOT TO SCALE



1 Water and air probes
Holds your temperature, all day. Winter mode runs the pump when the air nears freezing.

2 Flow switch
The chiller only runs with water flowing.

3 Chiller-outlet probe (Pro)
Shows the chiller is cooling, and flags early if it slows down.

4 Filter pressure sender (Pro)
Tells you to clean the filter before flow drops.

5 Power Hub
Switches your chiller's power. Ozone and UV run only while the pump moves water. Heater outlet for hot/cold tubs (Pro).

6 Home Assistant, pre-installed
Alerts by push, text, email and alarm. Ask Alexa if the plunge is ready.

2 PROBES: WATER AND AIR

1 FLOW SWITCH · NO DRY RUNS

0 SUBSCRIPTIONS

COLD PLUNGE CONTROL PRO · WHAT IT DOES

Your plunge, ready when you are.

- Most plunges run on the chiller's own basic thermostat or a Wi-Fi plug. Schedules are unreliable — owners report water still a few degrees warm at the set time.
- A clogged filter slows flow to a trickle and the chiller shuts off — or runs dry and wears out.
- Closed apps go offline after a router change, and a chiller is stranded if its maker disappears.

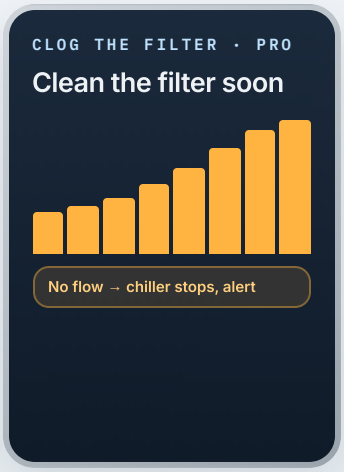
Self-install: plug the chiller, pump, ozone and UV into the Power Hub, drop in the probes, fit the flow switch on the pipe (Pro includes unions — no pipe cutting), scan the QR code. Price to be announced.

PRO · BUILDING NOW CONCEPT

- Controller with Home Assistant pre-installed and the Control Freak integration
- Power Hub — labelled outlets for chiller, pump, ozone and a spare
- Water and air temperature probes
- Flow switch
- Keyed, colour-coded cables
- Chiller-outlet probe (chiller health)
- Filter pressure sender (filter reminder)
- Plumbing unions — fits without cutting pipes
- Heater outlet for hot/cold tubs

Your tub, chiller, pump, ozone and UV aren't in the box — you keep the ones you have. Starter: coming later.

TRY IT IN THE SITE DEMO



Works with the chiller you have
Switches your chiller's power from the Power Hub — keep your chiller.

Chiller health (Pro)
A probe on the chiller outlet shows it's cooling, and flags early if it slows down.

Keeps working when the internet doesn't
Schedules run on the controller.
