HOW IT ALL CONNECTS · CONCEPT

Two pumps, one watchful hub.

Basement Guard Pro keeps an eye on the pit, the pipes and the floor — so you can stop listening for the pump every time it rains.

Safety rules don't depend on Home Assistant — Control Freak's own safety rules — pump switching, high-water and leak alarms, and the freeze heat-tape switch — keep running on the controller, even if Home Assistant stops.

Works with the Control Freak gear you already own: every Control Freak product is a complete kit on its own. If a Control Freak controller you already have has a free port or relay, Home Assistant can put it to work for this product too.

Numbers: Basement Guard Pro public brief, October 2026. Concept illustration, not to scale; equipment you already own is drawn dashed.
